SUMMARY

Senior cybersecurity student at Miami University with experience in full-stack development, secure application design, Linux systems, databases, and networking. Hands-on experience with Python, JavaScript, Node.js, Express, MySQL, and Docker, with a focus on authentication, encryption, HTTPS/SSL, and secure development practices. Strong foundation in software development, troubleshooting, systems, and cybersecurity through academic and independent projects.

EDUCATION

Miami University, Oxford, OH

Bachelor of Science in Cybersecurity | Expected May 2027

Senior | GPA: 3.44

Dean's List: Fall 2024, Fall 2025

SKILLS

Languages: Java, C++, Python, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: Flask, Node.js, Express, Bootstrap, mysql2

Tools & Technologies: Linux, Docker, VirtualBox, Git, GitHub, APIs, MySQL, SQLite, AWS EC2, SSH

Security: HTTPS/SSL, Authentication, Encryption, Network Security, Argon2

EXPERIENCE

KROGER, Lexington, KY

May 2025 - August 2025

Overnight Stocker

- Unloaded nightly trucks and stocked shelves, ensuring availability of products throughout the grocery.
- Used RF scanner/handheld to locate items and verify counts.
- Rotated product using FIFO and checked dates to reduce shrink and ensure freshness.
- Organized backroom (pallets, bays) and operated pallet jack to maintain safe and efficient storage.

PROJECTS

Secure Checkout Web Application

Technologies: HTML, CSS, JavaScript, Bootstrap, Node.js, Express, MySQL, HTTPS/SSL

- Developed a secure full-stack e-commerce checkout application using HTML, CSS, JavaScript, Node.js, Express, and MySQL. Implemented HTTPS/SSL encryption, secure order processing, tax calculation, database integration, and multiple payment options while applying secure development practices to protect user and transaction data.

Password Storage Application

Technologies: Python, Flask, Argon2, Encryption, Authentication

- Built a secure password storage application focused on protecting user data and improving password management. Implemented security-focused features including authentication, password generation, and secure storage practices while applying cybersecurity concepts and best practices.

Personal Portfolio Website

Technologies: HTML, CSS, Bootstrap, GitHub

- Designed and developed a responsive personal portfolio website to showcase technical projects, skills, and professional experience. Integrated project descriptions, resume accessibility, and GitHub links while strengthening frontend development and website design skills.

Movie Database Web Application

Technologies: Python, Flask, JavaScript, HTML, CSS, SQLite/MySQL, TMDB API, Docker

- Built a full-stack movie search application integrating the TMDB API to display dynamic movie information, trailers, ratings, and search results. Implemented database-backed search history with replay functionality and developed responsive frontend and backend components to improve the overall user experience.
